

Arrays

Arrays → sequential collection of same type of data

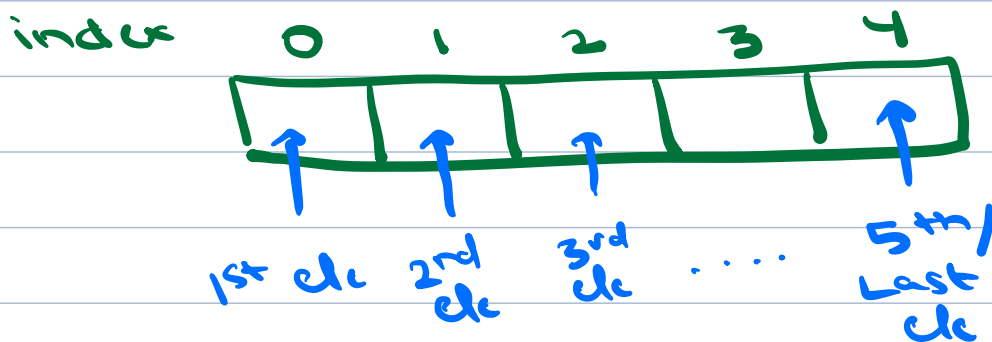

anything
int
float
char etc.

① `int arr[] = new int[5]`

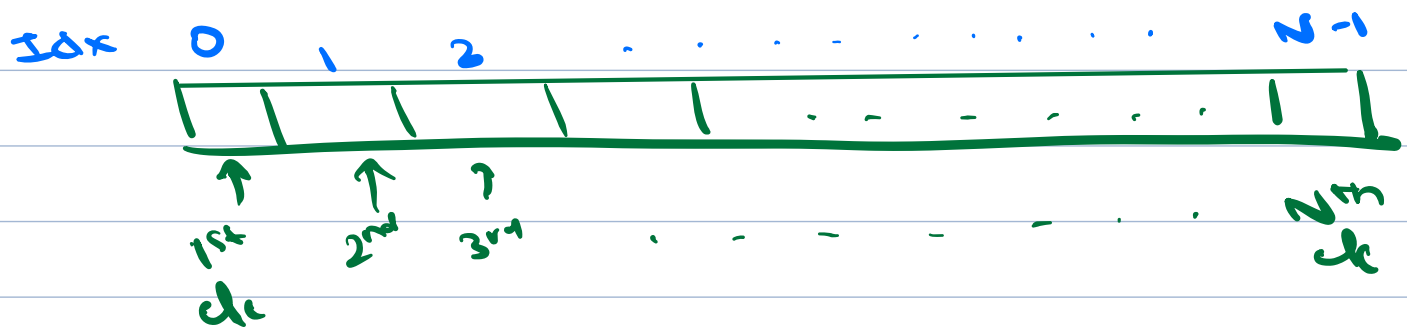

↓ ↓ ↘
datatype name int array of size
of array of array 5

② `int [] arr = new int[5]`

To access any element in array, we use index

Quiz 1: Array of size N ($0 \leq \text{idx} \leq N-1$)

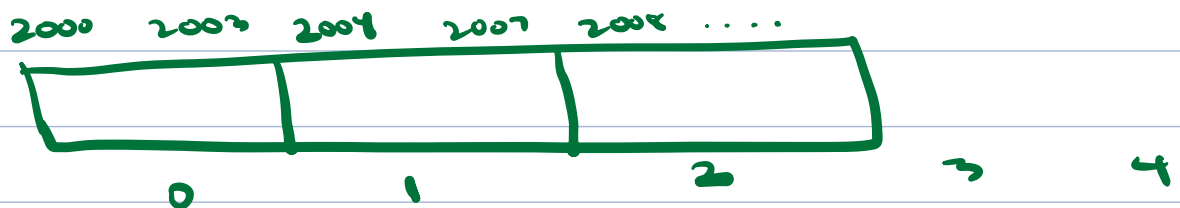

Start ele $\rightarrow$ 0th idx
Last ele $\rightarrow$ $N-1$ th idx

Quiz 2: Sum of all elements in
array: $\langle 3, 4, 1, 5, 1 \rangle$

$$\text{sum} = 3 + 4 + 1 + 5 + 1 = 14$$

`int ar = new int [5]`

1 int = 4 B

$$N = 9$$

0	1	2	3	4
3	4	1	5	1

maxi = 0 $\rightarrow$ 3 $\rightarrow$ 4 $\rightarrow$ 4 $\rightarrow$ 5 $\rightarrow$ 5
